## HOW TO MEASURE FOR AN ORDER

Determining the proper number of tiles to order requires just a few simple calculations.  
 $\text{Height} \times \text{Width} / \text{Coverage} + 10\%$

**STEP 1** - Determine the square feet of your project area(s) where Wolf Accents will be installed. To find this number, multiply the height (in feet) times the width (in feet) of each area to be tiled. Add the square feet from all areas to get your total square feet.

**STEP 2** - Divide the total square feet by the product coverage area to determine the total number of sheets or pieces required for your project.

**STEP 3** - Add 10% to the total number of sheets or pieces in your order to ensure you have adequate supply to account for normal loss during the installation process.
