

WOLF HAVEN™ DECKING

HOMESTEAD COLLECTION

CARE AND MAINTENANCE

Wolf Haven™ Decking, while very durable, must be maintained. The following recommendations will help keep the product looking its best. For all cleaners, please test on a small sample or an inconspicuous area prior to using to ensure compatibility.

- Periodic washing of the product using normal household products to remove dirt and debris. Products like DeckMAX® Revitalizer should be avoided as they can etch the cap of Wolf Decking and void the warranty.
- For rust removal, a household toilet bowl cleaner is recommended.
- NEVER use rubber backed items such as: mats, tarps, etc. for any extended amounts of time as these items may cause discoloration of the decking surface.
- Pool Covers left in place for extended periods of time may cause discoloration of the decking surface.
- Some chemicals in sun-block, insect repellent and similar products can alter the surface of Wolf Haven™ Decking. Check product labels and consult the manufacturer for compatibility with plastics before use.
- Ice Removal: Products containing calcium chloride can be used without damage to the surface but may leave a white residue. This can be cleaned using the principles outlined above. For snow removal only use a plastic shovel.
- While all synthetic decking can be subject to static electricity, static on Wolf Haven™ Decking to the point of getting a shock is rare. There is no chemical means to reduce static on a deck. As time passes, rain and dust will nullify any static charge you may encounter.
- Exercise caution when using PVC glue or similar products as they may discolor and permanently damage the deck surface.

NOTE

All decking surfaces absorb and retain heat from the sun. Greater heat retention may occur with darker colors, especially in areas of full exposure to the sun. This condition is due to the nature of the material in relation to environmental exposure, and is not covered by any express or implied warranty.

WARNING

Excessive heat build up from reflecting sunlight, especially reflected by low-emissivity (Low-E) glass, can potentially damage Wolf Haven™ Decking and other building materials, since these surface temperatures may far exceed exposure to normal sunlight. Possible damage by such concentrated heat may include warping, sagging, surface discoloration, unusual weathering and increased expansion or contraction.
